Washington, D.C. 20440

Dear Sirs,

I am writing to you to urge you to replace the current water level plan 1958D, with plan B+. I am a property owner on the St. Lawrence River. I believe that plan B+ is best for the greatest number of those concerned and the best for the environment as well.

I also recommend that you consider using current satellite technology to monitor water levels along the River. This technology along with computer modeling would enhance your ability to control the water flow and consequently the water levels in the river.

Sincerely

Daniel James Mereau

International Joint Commission
