Re: Lake Ontario Water Level issue

Date: July 24, 2006

Commissioner Schornack:

Attached are copies of the signed petitions that citizens of Wayne and Monroe Counties, New York recently sent to US Congressman James Walsh in protest of the three proposed candidate plans.

In lieu of Plans A+, B+ or D+, we urge the IJC go back to the drawing board to develop a fourth more acceptable plan, modify Plan D+ to include upper and lower water level limits, or retain the current criteria 1958 -D.

We, the undersigned, respectfully request the Honorable James Walsh, Member of Congress, to review the findings of the recently completed Lake Ontario-St. Lawrence River Study. After your review, please do whatever you can to aid us.

If any of these proposed plans are enacted, they will cause damage not only to private property, but also publicly owned taxpayer financed lands and sensitive environmental areas along the south shore of Lake Ontario.

Additionally, none of the proposed plans have upper or lower level targets and no protection against extreme high or low levels, as has been the assurance for over forty years

We have reviewed the study's findings and have found numerous faults, not only in the proposed plans, but the underlying research that the proposed plans are based upon.
