

Robert E. Long m.o

Monks from my

9/5/06.

Dear staff of the IJC I have read the proposals for the new plans for regulating the water levels on the St. Lawrence. My family have had property on the river since 1950 and have observed low and high waters to be good and bad. The trend for lower water levels have been harmful for people on the river in many areas. Fishing has declined as well making it difficult for the professional fishing and pleasure fishing. I support plan B which would help the fisheris and provide more water at the appropriate times.

Thank you

Robert E. Long m.o.
