

Beattie Beach Association
Greece, New York

Dennis L. Schornack, Chairman
International Joint Commission
U.S. Section
1250 23rd Street N.W., Suite 100
Washington, DC 20440

Dear Commissioner Schornack:

The Lake Ontario-St. Lawrence River Study Commission was initiated in 2000 to review current orders of approval and criteria to determine if they are still relevant to today's conditions. In its directive to the study board, the commission stated that it "will be seeking to benefit all the affected interests and the system as a whole". Based on information we have received over the past 5 years and the contents of the final study report, we have reached the following conclusions:

- The study was conducted and reported in a manner biased against residents and businesses located on the shoreline and embayments of Lake Ontario's south shore.
- All of the recommended operating plans will result in increased damage to shoreline and riparian property owners.
- The study does not recommend retaining the upper and lower water level targets for Lake Ontario contained in the current criteria (58D) and offers NO water level targets for any of the recommended operating plans. The existing water level targets and plan 58D have been relied upon for the past 40+ years.
- The existing water level targets have been used to design and build shore protection, road and bridge construction, sanitary and storm sewer lines and public utilities. The study does not account for the substantial cost associated with redesign and reconstructing shoreline protections and who will fund these.

We, the undersigned Beattie Beach Association members and friends, are asking for your help in dealing with this important issue. The 60 day comment period ends July 31, 2006. The International Joint Commission will be deciding on which plan to present at public meetings. We urge you to support the existing criteria (58D).

Sincerely,
Beattie Beach Association
Greece, New York
