Washington, DC 20440

From: N. Karasinski

Sodus Point, NY

Per your latest notice it is my understanding that the IJC has extended the period for comment on the International Lake Ontario - St. Lawrence River Study.

The Lake levels currently have been acceptable for much of our location which is the South side of Lake Ontario. If levels were allowed to raise nay height, especially in the spring there would be considerable loss of property as well as loss of wildlife habitat.

The floods created by increasing the Lake levels would force many of the long time residents on fixed incomes to leave their beloved homes on the water.

I sincerely hope this Commission considers the destruction and hardship this will cause.

Nancy Karasinski
