Dear Frank Bevacqua,

My name is Rachel Thompson, and I am writing to you about why it is important to have a healthy Lake Ontario and St. Lawrence River ecosystem and a deadline to implement plan B+. This is important to me because I want to live in a healthy environment and be able to swim in the United States water ways. In order to do that we need safe water for drinking. When I go to these waterways I would like it to be safe and clean.

This is important to me because ten years from now if we do not take care of this who knows where the ecosystems will be their will be less diversity in the wetlands and a lot less biodiversity in our economy today. Many species of fish were loss due to the loss of wetland diversity. We need to manage our water level. If we implement a plan to create a healthier environment then we the people will benefit from the lakes and rivers, including people who fish, people that enjoy boating like I do, water users and more.

I would like to thank you for taking the time to read my letter and taking my thoughts into consideration. i would like to ask you to please reply to this letter.

Sincerely,

Rachel Thompson
