

For Frank Bevacqua

Hello. My name is Jade Myers. I am writing you today because I am concerned about the water levels on Lake Ontario & the St. Lawrence River. As you are likely aware a study funded by our country & Canada, which included 180 scientists, found that the water levels controlled by the IJC have proven to cause a significant harmful effect not only on the natural environment, but the water quality - due to polluting runoff - which in turn effects the economies reliant on fishing, swimming, boating, & hydroelectric power. Our plants & wildlife depend on a more natural water level fluctuation for their survival & ability to thrive. Please impliment Plan B+ with a firm deadline to insure this water level fluctuation happens before we loose our resources.

Thank You for Your Consideration

Jade Myers
