RECEIVED-IJC  
INT COMMISSION  
A. 10: 39

July 5th, 2008

International Joint Commission  
1250 23<sup>rd</sup> St. N.W.  
Suite 100  
Washington D.C.  
20440

Dear Commissioners:

In the attached petition, my fellow concerned friends and I have canvased homes from Charlotte in the City of Rochester to Braddock Bay in the Town of Greece. Also, there are other signatories from this area and a few friends and family from all over the Country. There is consensus that we cannot tolerate any further increase in Lake Ontario water levels under any plan. These people know the potential fury of Lake Ontario from storms and high water.

As I am sure you know, Lake water levels have been artificially elevated since Plan 1958DD has been in effect. This has caused erosion of shoreline beaches, boat facilities, homes and infrastructure. For example, many of the people interviewed who own property along the Lake have already lost up to 25% of their deeded property to erosion since 1958. Also many already have break walls in place. Most of this property was bought and protected with the belief that Plan 1958DD was the Lake Plan for the future. We are still experiencing erosion since 1958. Why add more water?

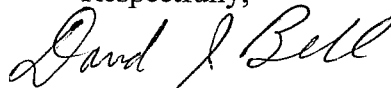

People reported memories of high water events over the years. For example, in 1998 with levels near 248 feet (the proposed target level for Plan B+), several people reported septic sewers manhole cover lids being popped off and raw sewage flowing down Old Edgemere Drive. Some people had to be evacuated due to high water and flooding and roads were closed. This event wasn't even a storm but only high water a foot above current levels with a strong breeze off the Lake!

Personally, I have already lost up to 15% of my deeded property to erosion and I have a break wall! And my home is at the same elevation as the Monroe County Pure Waters Pumping Station across the street from me, which supplies water to approximately 600,000 people in our area.

Finally, greater Lake water level fluctuation is touted by some environmentalists as a benefit to the environment. Many interviewed do not agree. The ponds and estuaries along the Lake and the Lake itself are most negatively affected by run off of phosphates (which stimulates plant growth) and pesticides (which kills water animals) at high water levels. We need a plan to further reduce runoff and contamination rather than change water level regulation.

Do not implement Plan 2007. We can live with Plan 1958DD and the current Orders of Approval. We can't afford to take on more water! Don't underestimate what damage one storm like Hurricane Agnes in June 1972 can do to Lake Ontario and surrounding areas.

Respectfully,

  
David J. Bell

Lake Ontario Water Level Petition

We, the undersigned, oppose Plan 2007 and any other plan that would allow any higher Lake Ontario Water Levels. We are still adjusting to higher average water levels that have been in effect since 1958! We can't take on more water without greater risk of damage to our homes and infrastructure (such as water treatment, sewers, roads and break walls). However, we can support lower seasonal levels to help preserve our shoreline and renew our estuaries.
