Angel Acevedo

East Rochester, NY

Dear Frank Bevacqua,

I am writing you in regards to Plan B+, to create a healthier environment specifically for Lake Ontario. The water quality at Ontario Lake has been very poor, the last couple of years. The beach has been closed due to high, unsafe toxin levels. I was swimming with my year old son, when someone came on a loud speaker urging people to get out of the water, for the toxin levels were at an unsafe level. I was worried about my sons safety and well being, all due to filthy toxic water. If we were asked to not swim because it was unsafe, than I can imagine the danger our wildlife is in, the contamination to the fish and other wildlife that interacts with the lakes water. There are so many reasons why clean, high quality water is important. So I urge you please protect the upstate New York economy + environment by adopting a firm deadline to implement Plan B+. Thank you for your time. If possible please respond to my concern in writing.
