Shannon Saxton

East Rochester, NY

Dear Frank Bevacqua,

I am writing you in regards to plan B+, to create a healthier environment specifically for Lake Ontario. I am a Rochester citizen with a two year old son. Throughout the years, I am always looking forward to summer. The best part of summer is swimming. And Ontario Lake is the ~~bes~~ most convenient place for us to go. But the last couple years the lakes toxic levels have been very high. At times it lead to the beach being closed. I remember just last year it happened while we were swimming. Someone came on a loud speaker urging people to get out of the lake because the toxic levels were at an unsafe level. My ~~1~~ year old son was wading around the water with me. All that ran through my head was "Oh my god, I hope my son didn't swallow any of that water, and if he did is he going to be OK?" That is a scary feeling. If you ~~wer~~ have children then I'm sure you understand. So I am asking, no... urging you, please set a firm deadline to implement Plan B+. Clean water is a neccessity in more ways than one. Thank-you for your time.
