

Table of Contents

Executive Summary	v
Key Findings	vi
Recommendations	
Physical Integrity	vii
Biological Integrity	viii
Chemical Integrity	ix
Ecosystem Integrity	ix
Introduction	1
Chapter 1	
Physical Integrity: Impact of Urban Areas on Great Lakes Water Quality	5
Introduction	5
The Impact of Urban Development on Water Quality	5
Science and Policy Approaches to Managing Urban Hydrology	6
The Impact of Urban Development on Groundwater	10
The Impact of Climate Change on Groundwater and Surface Water Quality	10
Conclusions	11
Recommendations	12
Chapter 2	
Biological Integrity: Impacts of Aquatic Alien Invasive Species and Pathogens	13
Introduction	13
Aquatic Alien Invasive Species: Living with the Uncertainty of Biological Pollution in the Great Lakes	13
Creating a Regional Approach: What We Can Do Better	17
Implement a Great Lakes Biologically Protective Standard	17
Require Certification of Technology to Achieve the Standard	18
Require Enhanced Ballast Management Practices for No Ballast on Board (NOBOBs) Ships	19
Promote Ongoing Regional Cooperation	20
Develop Measures to Ensure Compliance	22
Enlist the Assistance of the International Joint Commission	22
Recommendations	23
Microbial Contamination	24
Where are the Pathogens Coming From?	24
Detecting Pathogens and Assessing Risks	28
Gaps in Pathogen Detection	29
The Emergence of New Pathogens	30
The Walkerton Tragedy: A Lesson for the Great Lakes?	30

As Population Grows, Water Infrastructure Must Be Updated	32
Conclusions	34
Recommendations	34
Chapter 3	
Chemical Integrity: The Example of Mercury	35
Introduction	35
Sources and Forms of Mercury	35
Mercury and Human Health	36
Mercury and Fish Consumption	39
Complications of Chemical Mixtures	40
Reductions in Mercury Emissions	40
Conclusions	45
Recommendations	46
Chapter 4	
Ecosystem Integrity: The Changing Lake Erie Ecosystem	47
Introduction	47
Past Successes	47
Recent Trends and Possible Causes	48
Understanding Lake Erie's Complexity	53
Recommendation	55
Signature Page	57
Glossary of Terms	58
Endnotes	60
References	64
Tables	
1. Factors Associated with the Risk of New Pathogens and Impacts on Water Quality and Health in the Great Lakes Basin	25
2. Waterborne Pathogens, Associated Illnesses, and the Sources of Wastes	31
3. Organization Reference Doses for Methyl Mercury	38
4. Global Emissions in Tonnes (~tons) of Total Mercury from Major Anthropogenic Sources in the Year 1995	41
5. Summary of Recent Trends in Lake Erie Ecosystem Quality	49
Figures	
1. Major Urban Areas within the Great Lakes Basin	7
2. Potential Pathways for Waterborne Pathogens	25
3. Factors Affecting Viability along Transport Pathways	27
4. Emissions Profile of Mercury Releases -1999	43
5. Preliminary Mercury Emissions in Canada - 2002	43
6. Positive Changes in Lake Erie Ecosystem Quality, and Lake Erie Map	50
7. Negative Changes in Lake Erie Ecosystem Quality	51
