Comments Form - 2006 Progress Report under the Air Quality Agreement

First Name Doug
Last Name Hagar
Organization
Street address
City St. Catharines
Province/State Ontario
Postal code/ZIP Code
Country Canada
Email Address
Your comments In Great Britain air quality monitoring includes monitoring levels of carbon monoxide and benzene (<http://www.airquality.co.uk/>). Benzene has many adverse health risks however I did not see it listed under Volatile Organic Compounds. These compounds should be added to the Air Quality Agreement and there should be some type of program by the IJC to reduce the levels of these substances.
