

All of this has been dependent on well understood regulations, agreements and legislation. Uncertainty in water supply prevents long-term investment that is necessary to support the irrigation systems in southern Alberta. Our position is that the 1921 Order should remain as is. The Chamber of Commerce supports the Government of Alberta in its request to continue with the existing order and measurement periods. The Chamber is well aware that measurement and management go hand-in-hand and therefore also supports increased monitoring and measurement systems which will enable better management of water.

We thank you for this opportunity to comment.
